

2021 United Nations Decade
2030 of Ocean Science
for Sustainable Development

ENDORSED DECADE ACTIONS

June 2022

Access the Excel version of this information here: <https://oceanexpert.org/document/30518>

Contents

- 8.2. Global Ocean Negative Carbon Emission
- 11.2. Global Ocean Decade Programme for Blue Carbon
- 18.2. Ocean to climate Seamless Forecasting system
- 20.2. Healthy Rivers, Healthy Ocean
- 2.2. Science Without Borders®: Conserving the Tropics
- 6.2. Plastic Drawdown
- 7.2. Sustained Data for a Changing Ocean
- 16.2. The EMS centre - model system for future oceans
- 22.2. Hope for Reefs
- 25.2. Crustal Ocean Biosphere Research Accelerator
- 30.2. Allen Coral Atlas: Global Coral Reef Monitoring
- 31.2. Marine forest restoration:a coastal gardening plan
- 34.2. Deep-Ocean Genomes Program
- 38.2. Pacific Coral Reef Action Science and Knowledge
- 42.2. WCO Biomolecular Observing Network
- 47.2. Mayotte observatory for research and response
- 51.2. Maré de Ciência (Tide of Science)
- 54.2. Interoperability Architecture for a Digital Ocean
- 64.2. Naples Ecological REsearch Augmented observatory
- 65.2. The Cozumel Coral Conservatory
- 66.2. Hakai Institute Biomolecular Observing Network
- 76.2. NE Pacific Coastal Biodiversity Action Network
- 77.2. Somos OceanoS: ocean stories for conservation
- 86.2. Arctic Deep Observation for Multi-sphere Cycling
- 89.2. One Ocean Hub Research Programme 4
- 92.2. Better Biomolecular Ocean Practices
- 93.2. PlaSTic On beaches: 3D-distRibution and weathering
- 100.2. Urbanized coastal sustainability under GCCscenario
- 102.2. MetaZooGene: Metabarcoding Zooplankton Diversity
- 108.2. Ocean Tracking Network
- 109.2. Seabed Mining & Resilience To EXperimental impact

110.2. Synergistic Observing Network for Ocean Prediction

121.2. Ocean Twilight Zone Project

126.2. Integrated coastal ocean observing and predicting

127.2. Future Coastal Ocean Climates

129.2. Southern Ocean Flux Capability Working Group

131.2. Connecting communities to Atlantic Ocean observing

132.2. Fisherman Weather Field School (SLCN)

136.2. Enhancing capacity development in the TAC Region

138.2. Integrating Coastal Hazard Warning Systems for TAC

140.2. MACHC-IOCARIBE Seabed 2030 Project

142.2. NOAA Harmful Algal Bloom Forecasting

4.2. Center: Chemical Currencies of a Microbial Planet

27.2. Inundation Signatures on Rocky Coastlines

148.2. Sea Grant International

150.2. National Sea Grant College Program

74. Ocean Generation, Ocean Intelligence

81. Global Ocean Biodiversity Initiative

106. MIGRAVIAS: Connecting Marine Protected Areas (MPAs) through ocean swimways to protect migratory routes and critical habitats of endangered species.

UN24. Explore the strongest ocean current in the Western Pacific: the 2nd Cooperative Study of Kuroshio and Adjacent Regions – from its sciences to human well beings

UN25. An Ocean Data and Information System supporting the UN Decade of Ocean Science for Sustainable Development

UN21. Accelerate Marine Spatial Planning in the Western Pacific

UN22. Stem the tide of Asia's riverine plastic emission into the ocean

UN23. Accelerating capacity development transformations in the Western Pacific - Regional Network of Training and Research Centers (RTRCs) on Marine Science

UN2021-002. WYTEC Blue - Women & Youth Technical Capacity for the Blue Economy: Growing Technical Capacity amongst Women and Youth in Canada & West Africa for a Safe, Secure and Sustainable Blue Economy

UN2021-003. Ocean School Global Community Project: Building Ocean Literacy through Community Engagement

UN2021-004. First Nations – Trusted Crowd-Sourced Bathymetry & Capacity Building in British Columbia, (FN-TCSB&CBBC)

UN2021-005. Monitoring ecological resilience in Northern Fisheries inshore regions through community-based environmental genomics

UN2021-014. X-Oceans: Enhancing Ocean Literacy in Youth in Rural Northeastern Nova Scotia

UN2021-025. Blue Carbon as a Canadian Climate Change Solution: Modelling the Mitigation Potential of Kelp Under Future Climate Change Scenarios

UN2021-026. Mapping and Improving High-Value Habitat influenced by Derelict Fishing Gear in the Salish Sea

UN2021-030. Advancing Indigenous Partnerships in Ocean Science for Sustainability: A contribution to the United Nations Decade of Ocean Science for Sustainable Development

UN2021-031. Advancing Ocean Literacy for the UN Decade in Canada

ENDORSED DECADE PROGRAMMES

8.2. Global Ocean Negative Carbon Emission

Xiamen University - China

Summary

Securing mitigation and adaptation solutions to climate change is an urgent requirement. The ocean has the potential to store globally significant amounts of CO₂, but approaches to enhance carbon sequestration require development and evaluation. Global-ONCE will undertake and facilitate the science required to evaluate and implement eco-technological interventions, including learning from paleo-oceanic carbon processes to predict the future, restoring impacted marine ecosystems, fostering nature-based systems of land-sea integrated management, upwelling manipulation, microbial-driven comprehensive carbon sequestration, adjustment of nutrients, DO and pH. Global ONCE will 1) develop an international network of field stations and research facilities, 2) co-design interdisciplinary collaborative research, 3) develop an evaluation framework for mitigation and adaptation approaches, 4) co-ordinate capacity building and 5) facilitate equitable policy, governance and societal understanding.

Challenges Addressed

Challenge 2: Protect and Restore Ecosystems

Challenge 4: Sustainable Ocean Economy

Challenge 5: Ocean-Climate Nexus

Start date: 01/01/2022

End date: 31/12/2030

Lead Contact: Nianzhi Jiao (jiao@xmu.edu.cn)

Host programme: Not applicable

11.2. Global Ocean Decade Programme for Blue Carbon

The University of St Andrews - United Kingdom of Great Britain and Northern Ireland (UK)

Summary

GO-BC will enhance understanding of the ocean-climate nexus and generate new knowledge and solutions to mitigate the effects of climate change. Recognising the multiple roles BC ecosystems play beyond mitigation, including adaptation and resilience to the effects of climate change, allows GO-BC to address climate responses comprehensively, while supporting people and biodiversity. GO-BC actions will go beyond the traditional focus on coastal ecosystems to deliver new outcomes across estuarine-coastal-open ocean environments. GO-BC will address SDGs 13, 14 and 17 through enhanced scientific cooperation at all levels, including: (1) codesign and implement new research to promote Nature-based Solutions for better ocean sustainability; (2) enhance global to regional collaborative efforts; (3) coordinate capacity building in blue carbon science; and (4) communicate and deliver outputs to policy makers and communities.

Challenges Addressed

Challenge 2: Protect and Restore Ecosystems

Challenge 5: Ocean-Climate Nexus

Challenge 10: Behaviour Change

Start date: 01/05/2022

End date: 31/12/2030

Lead Contact: William Austin (wena@st-andrews.ac.uk)

Host programme: Not applicable

18.2. Ocean to climate Seamless Forecasting system

First Institute of Oceanography (FIO), Ministry of Natural Resources - China

Summary

The goal of the OSF programme is to dramatically improve our forecasting capability for the ocean and climate. OSF builds on very recent observational and computational breakthroughs. During its implementation, satellites will be launched, new-generation drifting buoys will be deployed, transformative theories on air-sea interactions will be formulated, and a seamless ocean-to-climate forecasting system will be developed. The overarching goals of OSF are to (1) understand the ocean-climate nexus, (2) enhance observation capabilities using novel technologies, (3) integrate observations with cutting-edge ocean-to-climate models, (4) provide public services and products through developing a multi-hazard early warning system, and (5) exchange advanced knowledge and theories on ocean science and ocean management with the young generation, especially to those in SIDS, LDCs and LLDCs.

Challenges Addressed

Challenge 5: Ocean-Climate Nexus

Challenge 6: Community Resilience

Challenge 7: Ocean Observations

Start date: 01/06/2022

End date: 31/12/2030

Lead Contact: Fangli Qiao (qiaofl@fio.org.cn)

Host programme: Not applicable

20.2. Healthy Rivers, Healthy Ocean

Global Water Partnership Organization - Sweden

Summary

The seas, surface waters, and groundwater supports life and the economy. However, their health is critically threatened. There is a systemic gap between the ocean and freshwater management communities. As a result, there is insufficient political and financial investment in safeguarding the services that the water systems, from the source to the sea, provide. The disconnects in policy development and implementation among basin, coastal, and marine areas lead to management failures, which result in issues such as pollution, alterations in sediment flows, and habitat fragmentation etc., with severe impacts on freshwater and marine ecosystems. The lack of concerted action between the ocean and freshwater communities for the achievement of SDG 6 and SDG 14 leads to a missed opportunity for an integrated response. The HRHO programme is designed to assist in addressing disconnects and systemic gaps and enable accelerated source-to-sea action at regional, national, and sub-national levels

Challenges Addressed

Challenge 1: Marine Pollution

Challenge 2: Protect and Restore Ecosystems

Challenge 4: Sustainable Ocean Economy

Start date: 01/06/2022

End date: 31/05/2028

Lead Contact: Yumiko Yasuda (yumiko.yasuda@gwp.org)

Host programme: Not applicable

ENDORSED DECADE PROJECTS

2.2. Science Without Borders®: Conserving the Tropics

Khaled Bin Sultan Living Oceans Foundation (KSLOF) - United States of America (USA)

Summary

Humanity depends on healthy and diverse ecosystems. Mangroves, seagrasses, and coral reefs host some of the highest biodiversity on Earth. They provide habitat, food, and breeding grounds for marine life, and food, income, and protection to communities. However, these fragile ecosystems are rapidly being degraded. The Living Oceans Foundation spent 10 years mapping and surveying the world's reefs, collecting an array of data, conducting outreach and education activities, and establishing a baseline status of the world's reefs and nearshore habitats. The Science Without Borders® project will leverage this dataset for conservation, using it to improve the monitoring and management of coral reefs, seagrass beds, and mangrove forests. Using our network of in-country partners, this project will allow us to bring science, outreach, and education programs to SIDS and LDC's, engage communities, improve ocean literacy, and develop science-based solutions to conserve tropical marine ecosystems.

Challenges Addressed

Challenge 2: Protect and Restore Ecosystems

Challenge 3: Sustainable Blue Food

Start date: 01/07/2022

End date: 31/12/2030

Lead Contact: Renee Carlton (carlton@lof.org)

Host programme: Not yet defined

6.2. Plastic Drawdown

Common Seas - United Kingdom of Great Britain and Northern Ireland (UK)

Summary

Plastic Drawdown (PD) is a proven rapid assessment tool to help countries develop an evidence-based policy response to ocean plastic pollution when data is limited. We want to use PD to help 10 new countries understand their plastic waste flows, identify policy interventions, and announce evidence-based strategies that reflect their needs and have stakeholder support. PD was developed in consultation with 27 governments, resulting in a rapid, cost-effective, collaborative and user-friendly approach to support policy development, particularly in low and middle-income countries with limited data and a significant plastic problem. Our vision is to support ambitious but resource-constrained decision-makers to deliver effective national strategies that address the full life cycle of plastics with actions spanning the value chain, adapting our approach to meet country-specific requirements. We also want to disseminate the lessons learned from these 10 countries to support action elsewhere.

Challenges Addressed

Challenge 1: Marine Pollution

Start date: 01/01/2022

End date: 31/12/2031

Lead Contact: Ben Jack (ben@commonseas.com)

Host programme: Not yet defined

7.2. Sustained Data for a Changing Ocean

Ocean Observatories Initiative - United States of America (USA)

Summary

The Ocean Observatories Initiative (OOI) provides sustained ocean observations and data delivery that researchers around the globe are using to identify, quantify, and ultimately assess ongoing changes in the global ocean. Commissioned in 2016, OOI is a long-term project to collect ocean data for 25 years or more. This longevity makes it possible to measure and observe short-lived episodic events and longer-term changes in the ocean. OOI currently consists of five instrumented arrays that continually measure more than 200 different parameters. The arrays gather physical, chemical, geological, and biological data from the air-sea interface to the seafloor. These data are freely available to anyone with an Internet connection. The arrays also function as test beds for new sensor technology to help advance the state of the art in ocean observation. Endorsing OOI as a UN Ocean Decade Program will ensure these data have a global reach, providing a foundation for ocean-related policies.

Challenges Addressed

Challenge 5: Ocean-Climate Nexus

Challenge 7: Ocean Observations

Challenge 9: Capacity Development

Start date: 06/01/2014

End date: 30/09/2034

Lead Contact: James B. Edson (jedson@whoi.edu)

Host programme: Not yet defined

16.2. The EMS centre - model system for future oceans

Leon H. Charney School of Marine Sciences, University of Haifa - Israel

Summary

The EMS is one of the most rapidly changing ocean basins impacted by climate change and extensive anthropogenic pressures. The EMS is used as an early warning and model system to examine ecosystem resilience and sensitivity. The Helmholtz International Lab EMS-FORE, based in Haifa, combines GEOMAR's unique experience in investigating biogeochemical processes in global oceans with Haifa's knowledge of the functioning of the EMS and in situ observational platforms. We will use world class facilities of the partners, multiple technologies for ocean observations, experimental manipulations and model-data fusion, research cruises, moorings and deployments of ROVs, AUVs and gliders, novel cameras and chemical sensors, and adaptive marine ecosystem models. Education of a new generation of early career scientists, PhD and MSc students forms a key aspect of EMS FORE, joint cruises, workshops and summer schools. We invite researchers internationally to become involved in our activities.

Challenges Addressed

Challenge 2: Protect and Restore Ecosystems

Challenge 4: Sustainable Ocean Economy

Challenge 7: Ocean Observations

Start date: 01/01/2022

End date: 31/12/2026

Lead Contact: ILANA BERMAN-FRANK (iberman2@univ.haifa.ac.il)

Host programme: Not yet defined

22.2. Hope for Reefs

California Academy of Sciences - United States of America (USA)

Summary

Hope for Reefs is a major initiative at the California Academy of Sciences that aims to reverse the rapid decline of Earth's coral reefs in this generation. Over the next five years, we will advance high-impact interventions—from establishing sustainable fisheries and marine protected areas to on-the-reef restoration—all implemented with local communities and cross-sector stakeholders. We will scale a successful model for community reef monitoring to the national level; increase capacity for rapid response to catastrophic events impacting reefs; and apply new technologies to map, monitor, forecast, and regenerate reef health. We will also leverage our world-class education programs and Steinhart Aquarium to inspire and train a diverse cadre of future reef scientists while supporting a global youth corps of emerging environmental leaders advocating on behalf of coral reefs.

Challenges Addressed

Challenge 2: Protect and Restore Ecosystems

Challenge 9: Capacity Development

Challenge 10: Behaviour Change

Start date: 01/07/2021

End date: 30/06/2026

Lead Contact: Luiz Rocha (lrocha@calacademy.org)

Host programme: Not yet defined

25.2. Crustal Ocean Biosphere Research Accelerator

Bigelow Laboratory for Ocean Sciences - United States of America (USA)

Summary

Remote crustal ocean environments are currently targeted for emergent human uses such as deep-sea mining and carbon sequestration, but there are fundamental knowledge gaps surrounding our understanding of the magnitude of ecosystem services provided by life in crustal ocean habitats as well as their resilience to perturbations. The Crustal Ocean Biosphere Research Accelerator (COBRA) will bring together an international team of interdisciplinary academic and government scientists, private institutions, policy makers, and other stakeholders to coordinate efforts to achieve objectives of mutual benefit that will catalyze new knowledge and inform decision making related to the crustal ocean biosphere. In parallel, this endeavor will train the next generation of leaders in ocean exploration, science, and policy through innovative virtual expedition leadership training programs that promote team science collaboration, diversity, equity, and inclusivity.

Challenges Addressed

Challenge 2: Protect and Restore Ecosystems

Challenge 9: Capacity Development

Challenge 10: Behaviour Change

Start date: 01/10/2021

End date: 01/10/2026

Lead Contact: Beth Orcutt (borcutt@bigelow.org)

Host programme: Not yet defined

30.2. Allen Coral Atlas: Global Coral Reef Monitoring

Arizona State University's Center for Global Discovery and Conservation Science - United States of America (USA)

Summary

The Allen Coral Atlas is a game-changing coral conservation tool powered by Arizona State University and developed in partnership with Planet, University of Queensland, the Coral Reef Alliance and Vulcan, and coral reef scientists, universities, NGOs and private entities. Its goal is to assist stakeholders ranging from local communities to regional and national governments to reach their coral reef conservation goals. With the Atlas, coral conservationists, reef managers and scientists have access to information that has never before been available at this scale, including high resolution coral reef habitat maps, real time bleaching monitoring, and expanding monitoring innovations. More information at www.allencoralatlas.org

Challenges Addressed

Challenge 2: Protect and Restore Ecosystems

Challenge 8: Digital Representation of the Ocean

Challenge 9: Capacity Development

Start date: 01/11/2018

End date: 31/12/2026

Lead Contact: Paulina Gerstner (pgerstne@asu.edu)

Host programme: Not yet defined

31.2. Marine forest restoration:a coastal gardening plan

Underwater Gardens International - Spain

Summary

Active restoration has emerged as one of the preferred tools that may boost sequels of marine protected areas and other conservation measures. Restoration acts promote biodiversity, enhance carbon sequestration and accelerate coastal and offshore resilience. Yet, we still lack a program that combines conservation and restoration under a unified setting considering local citizen socio-economic parameters. BLUE CITIZEN proposal represent a novel restoration approach in which (1) restoration is depicted with ubiquitous properties (2) a profession of “gardeners of the sea” is created and endorsed (3) the project targets the restoration of the most neglected marine biome, the Marine Forests;(4) new ecoengineering aspects are applied; (5) the plan is performed on land and in the sea, from shallow, mesophotic to continental shelf areas; (6) a novel approach for C sequestering is applied and (7) involvement of citizens and local stakeholders with a business plan is developed.

Challenges Addressed

Challenge 2: Protect and Restore Ecosystems

Challenge 5: Ocean-Climate Nexus

Challenge 10: Behaviour Change

Start date: 01/05/2022

End date: 30/04/2025

Lead Contact: Sergio Rossi (sergio@underwatergardens.com)

Host programme: Not yet defined

34.2. Deep-Ocean Genomes Program

Woods Hole Oceanographic Institution - United States of America (USA)

Summary

The Deep-ocean Genomes project will use cutting edge next generation sequencing technologies and comparative genomics methods to obtain fundamental new knowledge of the organization, evolution, functions, and interactions of life in one of Earth's least-understood regions, the deep ocean.

Challenges Addressed

Challenge 2: Protect and Restore Ecosystems

Challenge 5: Ocean-Climate Nexus

Challenge 9: Capacity Development

Start date: 19/01/2022

End date: 19/01/2032

Lead Contact: Timothy Shank (tshank@whoi.edu)

Host programme: 57. Challenger 150 - A Decade to Study Deep-Sea Life

38.2. Pacific Coral Reef Action Science and Knowledge

Secretariat of the Pacific Regional Environmental Programme - Samoa

Summary

This action will provide the science needed to support Pacific Island Countries to build resilience of coral reefs. Many challenges face Pacific Islands Small Developing states to effectively manage the ¼ of the world's coral reefs under their jurisdiction. The Pacific Island Coral Reef Action Plan which sets out 8 key action areas where regional cooperation and international partnerships can support regional efforts to manage threats to coral reefs. The action will galvanise international science partners to share knowledge, resources and technology to avoid loss of this crucial marine biodiversity resource. The Action will form a group of projects under the following themes identified in the plan. 1. Optimise Capacity Building 2. Foster traditional knowledge 3. Coordinate education and awareness 4. Streamline regional and local collaboration 5. Conserve Habitat and biodiversity 6. Science for habitat restoration 7. Coastal fisheries management 8. Apply research and monitoring

Challenges Addressed

Challenge 1: Marine Pollution

Challenge 2: Protect and Restore Ecosystems

Challenge 10: Behaviour Change

Start date: 01/06/2022

End date: 31/12/2031

Lead Contact: Peter Davies (peterd@sprep.org)

Host programme: 84. Pacific solutions to save our ocean: an integrated ocean science programme towards a healthy Blue Pacific Continent to sustain future generations.

42.2. WCO Biomolecular Observing Network

Marine Biological Association - United Kingdom of Great Britain and Northern Ireland (UK)

Summary

The Western Channel Observatory – Biomolecular Observing Network (WCO BON) will build on the successes of over a century of continuous biological observations (including 20 years of DNA sampling) by combining with innovative autonomous solutions for sampling, data capture and development of predictive capability through biological digital twins. The observatory covers almost 1,000 km² of coastal ocean in the Western English Channel adjacent to the city of Plymouth; home to three world-leading marine research organisations. Biomolecular observations will help map key biodiversity knowledge through temporal and spatial monitoring, with the bigger challenge of determining the biological functional capacity of this immense evolving marine genomic reservoir. Our ambition is to achieve integrated global biomolecular observations and data sharing through networks of excellence and capacity development. Its predictive capability will ultimately revolutionise sustainable ocean management.

Challenges Addressed

Challenge 2: Protect and Restore Ecosystems

Challenge 5: Ocean-Climate Nexus

Challenge 7: Ocean Observations

Start date: 01/02/2022

End date: 31/01/2032

Lead Contact: Willie Wilson (wilwil@mba.ac.uk)

Host programme: 26. Ocean Biomolecular Observing Network (OBON)

47.2. Mayotte observatory for research and response

IFREMER - France

Summary

The MARMOR project will provide the French scientific community with the mobile and cabled equipment required to advance the study of the earth deformation, seismicity, tsunamis, volcanism, and of several key environmental issues in ocean and coastal areas, by extending the on land observations capabilities into the marine domain.

Challenges Addressed

Challenge 2: Protect and Restore Ecosystems

Challenge 5: Ocean-Climate Nexus

Challenge 6: Community Resilience

Start date: 01/06/2021

End date: 31/05/2029

Lead Contact: Louis Géli (Louis.Geli@ifremer.fr)

Host programme: 77. One Ocean Network for Deep Observation

51.2. Maré de Ciência (Tide of Science)

Universidade Federal de São Paulo (UNIFESP) - Brazil

Summary

Maré de Ciência (Tide of Science) works on the interface between science, public policies and society, promoting ocean literacy based on dialogue, knowledge exchange, and engagement. We work on ocean sciences in the context of the 2030 Agenda and the Sustainable Development Goals, in line with the goals of the UN Ocean Decade - contributing to ocean literacy awareness for different sectors of the society, integrating ocean literacy values and principles to behavior change towards more sustainable actions. We value participants as the protagonist of the production of knowledge and the joint construction of the processes, the activities are not designed to be for the audience but with the audience. This initiative integrates science, education and outreach, and is co-design between the university, public authorities and civil society. It breaks the vision of knowledge and research only within universities and shows that quality and impact science is done with everyone together.

Challenges Addressed

Challenge 9: Capacity Development

Challenge 10: Behaviour Change

Start date: 01/02/2017

End date: 31/12/2024

Lead Contact: Ronaldo Christofolletti (christofolletti@unifesp.br)

Host programme: UN7. Ocean Literacy With All (OLWA): the change we need for the ocean we want

54.2. Interoperability Architecture for a Digital Ocean

SINTEF Ocean - Norway

Summary

As initiatives around the globe begin to enhance ocean-oriented digital capacity, we have unprecedented opportunities to power digital twinning. Currently there are many initiatives that work toward or in support of a Digital Twin of the Ocean, e.g. the EU Digital Twin Ocean system, NOAA's National Centre for Environmental Information, the IOC Ocean Data and Information System ODIS, the IOC Ocean Best Practice System OBPS, the Ocean Data Action Coalition and the UN Data Coordination Group. DITTO's Priority Activities are a) Articulate and advance a common understanding of Digital Twins of the Ocean architecture. b) Advance a number of "use case" prototype Digital Twin applications across the spectrum from science, engineering and operations; and c) Encourage the formulation of DITTO related Decade Projects. Motivated by this, we propose to coordinate ongoing initiatives to address priority activity a) and work towards an interoperability architecture for the Digital Twins of the Ocean.

Challenges Addressed

Challenge 8: Digital Representation of the Ocean

Start date: 01/09/2022

End date: 31/12/2025

Lead Contact: Ute Brønner (ute.broenner@sintef.no)

Host programme: 137. Digital Twins of the Ocean – DITTO

64.2. Naples Ecological REsearch Augmented observatory

Stazione Zoologica Anton Dohrn - Italy

Summary

The augmented observatory NEREA (www.nerea-observatory.org; <https://www.imeko.org/publications/tc19-Metrosea-2019/IMEKO-TC19-METROSEA-2019-20.pdf>) is an initiative for integrating and augmenting the Marechiaro LTER (Long Term Ecological Research, active since 1983) in the Gulf of Naples with moorings, stand-alone seabed platform, regular short cruises across gradients (polluted vs pristine sites, vertical dimension, oligotrophy/eutrophic) and question-driven process studies, using both innovative (genomics, imaging-both HD and acoustic cameras, microplastics sampling) and traditional techniques (including trace elements analyses). The NEREA project is thus designed to promote and to apply multidisciplinary approaches, from the sampling strategy, to the development of new indicators for ocean health and of new models of the ocean microbiomes.

Challenges Addressed

Challenge 2: Protect and Restore Ecosystems

Challenge 7: Ocean Observations

Challenge 9: Capacity Development

Start date: 01/04/2019

End date: 31/12/2032

Lead Contact: Raffaella Casotti (raffaella.casotti@szn.it)

Host programme: 26. Ocean Biomolecular Observing Network (OBON)

65.2. The Cozumel Coral Conservatory

Living Sea Sculpture - United States of America (USA)

Summary

The Cozumel Coral Conservatory (CozCC) is a unique place to preserve and grow corals uniting science, technology, engineering, arts, and math (STEAM). A diverse coalition of all ages, including nonprofits, universities, individuals, private entities, and governmental institutions, are working to protect, monitor, and rehabilitate the Mesoamerican Barrier Reef in Cozumel, Mexico. The CozCC aims to increase coral coverage, marine biodiversity, and shore protection in the Villa Blanca Reef tract through recognized best practices and groundbreaking innovation while offering novel opportunities for ocean engagement, science education and employment made possible through trans-disciplinary collaboration. Natural coral heads, as well as artistic and functional artificial reef structures and sculptures, populate the seafloor in this shallow reef. The CozCC bridges quantitative science and the originality of hands-on creation to scale coral restoration and strive for a balanced, healthy ocean.

Challenges Addressed

Challenge 2: Protect and Restore Ecosystems

Challenge 4: Sustainable Ocean Economy

Challenge 9: Capacity Development

Start date: 22/01/2022

End date: 30/12/2030

Lead Contact: Colleen Flanigan (misssnailpail@gmail.com)

Host programme: 17. Marine Life 2030

66.2. Hakai Institute Biomolecular Observing Network

Tula Foundation - Canada

Summary

HI-BON is a highly coordinated network of partners across British Columbia, Canada who are using long-term genetic-based assessments of marine biodiversity to create baselines, track changes through time, and provide local-scale biodiversity data in remote areas. The taxonomic focus of this research is broad, with core initiatives quantifying the diversity of fish, invertebrates, and microbes. Biomolecular sampling began at the Hakai Institute in November 2014 and has now grown to a large-network of over 20 partners collecting monthly samples across the BC coast. Our network emphasizes: 1. Standardization of biomolecular monitoring approaches in BC, with the goal to align with global OBON standards. 2. Building capacity by developing community partnerships to enhance spatial and temporal coverage. 3. Open data and contribution to a broad coalition of partners across regional and global communities (i.e. GOOS) to assist in conservation and sustainable management of BC waters and beyond.

Challenges Addressed

Challenge 2: Protect and Restore Ecosystems

Challenge 7: Ocean Observations

Challenge 9: Capacity Development

Start date: 08/06/2022

End date: 20/12/2030

Lead Contact: Colleen Kellogg (colleen.kellogg@hakai.org)

Host programme: 26. Ocean Biomolecular Observing Network (OBON)

76.2. NE Pacific Coastal Biodiversity Action Network

Tula Foundation - Canada

Summary

NEPac-BAN will foster cross-boundary biodiversity science for action-oriented marine conservation and management. The Project will generate a Network of ocean practitioners, including scientists, Crown, and Indigenous decision makers, community members, educators and communicators, to co-design marine life observing for biodiversity science.. NEPac-BAN is structured around taxonomic groups (Nodes) and a Synthesis Hub that will tackle cross-cutting themes by integrating across the tree of life to address challenges facing the NE Pacific coastal ocean. The network will co-develop a) Essential Biodiversity and Ocean Variables for the NE Pacific; b) best practices and capacity for biodiversity observations and data management; and c) biodiversity analysis for conservation and restoration actions. These components form an Action Cycle to advance understanding and improve management outcomes by leveraging existing strengths and creating spaces for exchange across the Canada-US border.

Challenges Addressed

Challenge 2: Protect and Restore Ecosystems

Challenge 7: Ocean Observations

Challenge 9: Capacity Development

Start date: 01/09/2022

End date: 01/01/2031

Lead Contact: Matt Whalen (matt.whalen@hakai.org)

Host programme: 17. Marine Life 2030

77.2. Somos OceanoS: ocean stories for conservation

Sea Around Us, University of British Columbia - Canada

Summary

“Somos OceanoS 2030” (SOS2030) promotes the perspectives of communities on marine management and raises awareness of the ecological, social and economic value of various Marine Protected Areas (MPAs) across the world through accessible science communication. SOS2030 is a holistic project that will work with three different Ocean Decade programmes, the Marine Life2030, the Early Career Ocean Professionals and the Empowering Women. The project will deliver transboundary and transdisciplinary ecosystem knowledge in places identified as “paper MPAs” (Relano et al. forthcoming). SOS2030 advocates for marine conservation, sustainable resource management and effective MPA governance through community engagement, science communication and knowledge sharing. A pilot project is presently taking place in an MPA in northern Patagonia. A documentary will be produced highlighting local environmental challenges such as industry pollution, mass tourism and unregulated fishing.

Challenges Addressed

Challenge 2: Protect and Restore Ecosystems

Challenge 5: Ocean-Climate Nexus

Challenge 10: Behaviour Change

Start date: 01/06/2022

End date: 01/12/2030

Lead Contact: Veronica Relano (v.relano@oceans.ubc.ca)

Host programme: 17. Marine Life 2030

86.2. Arctic Deep Observation for Multi-sphere Cycling

Second Institute of Oceanography, Ministry of Natural Resources - China

Summary

About 95% of the ocean's carbon is stored in intermediate and deep waters. The intense dynamic processes of the mid-ocean ridge in the Arctic Ocean results in abundant hydrothermal and cool crustal circulation, which has significantly affected the "slow carbon cycle" of the deep ocean. This project aims to establish an innovative multinational cooperation pattern involving multiple stakeholders, to conduct multidisciplinary and multiscale research on the mass and energy exchange in the lithosphere, cryosphere, hydrosphere, and biosphere of the Arctic Ocean. The project involves assessing the impact of matter cycling between different spheres of the carbon cycle and ecosystem, developing models to predict the response of the Arctic Ocean to global change, and providing solutions and regional management schemes. This project also includes the construction of a transparent database, the optimization of logistics capabilities, and the creation of opportunities for early-career scientists.

Challenges Addressed

Challenge 2: Protect and Restore Ecosystems

Challenge 7: Ocean Observations

Challenge 9: Capacity Development

Start date: 01/06/2022

End date: 31/12/2030

Lead Contact: Jiabiao Li (jbli@sio.org.cn)

Host programme: 129. Deep Ocean Observing Strategy

89.2. One Ocean Hub Research Programme 4

University of Strathclyde - United Kingdom of Great Britain and Northern Ireland (UK)

Summary

OOH RP4 is a strand of the One Ocean Hub (www.oneoceanhub.org), an international programme of transdisciplinary research for sustainable development. Focusing on the human right to science through capacity building for deep sea science in the South-East Atlantic, OOH RP4 will advance understanding of offshore marine biodiversity through new deep-water surveys in one of the world's most poorly known ecosystems. It will advance knowledge of environmental changes on deep-sea biodiversity and develop new methods to assess impacts of multiple stressors on deep-water vulnerable habitat-forming species found in Vulnerable Marine Ecosystems and Ecologically or Biologically Significant Areas. It will ensure uptake of science by co-producing novel modelling methods to visualise and predict the distribution of species and habitats and of multiple threats to stimulate various management scenarios.

Challenges Addressed

Challenge 2: Protect and Restore Ecosystems

Challenge 9: Capacity Development

Challenge 10: Behaviour Change

Start date: 12/02/2019

End date: 31/12/2029

Lead Contact: Dr Bernadette Snow (bernadette.snow@strath.ac.uk)

Host programme: 57. Challenger 150 - A Decade to Study Deep-Sea Life

92.2. Better Biomolecular Ocean Practices

Monterey Bay Aquarium Research Institute (MBARI) - United States of America (USA)

Summary

Methodological information is essential to understand the biomolecular data it generates (its limitations, strengths, and the ability to integrate and compare it with other datasets). However, in the biomolecular community, this information is often buried in publications that lack sufficient detail and are neither machine readable nor actionable. Within the IOC-UNESCO OBPS system, we have started an effort to exhume and empower these critical information artifacts. Under OBON, we propose building upon and expanding those efforts into a project for the digitisation of omics protocols from long-term observatories around the world using machine-readable templates and metadata. This will leverage and advance activities to develop protocol templates and metadata specifications, while working with strategic OBON partners in ocean observing and contributing to OBON's aims for capacity sharing and inter-programme coordination (OBON - OceanPractices).

Challenges Addressed

Challenge 4: Sustainable Ocean Economy

Challenge 7: Ocean Observations

Challenge 9: Capacity Development

Start date: 01/01/2022

End date: 01/06/2024

Lead Contact: Kathleen Pitz (kpitz@mbari.org)

Host programme: 26. Ocean Biomolecular Observing Network (OBON)

93.2. PlaSTic On beaches: 3D-distRibution and weathering

Clermont-Auvergne INP - France

Summary

Recent global plastic pollution models predict that two thirds of the plastic mass released from land into the ocean since 1950s is likely to have stranded around the world's shoreline. Yet, our knowledge of the fate of beached Marine Plastic Debris (MPD) remains limited. We propose a novel approach based on repeated field-surveys of surface and buried MPD and studying physico-chemical transformations induced by MPD aging on Hawaiian beaches, which are known hot-spots for MPD due to their proximity to the North Pacific Garbage Patch. Repeated field-survey data of surface and buried MPD on beaches will generate dynamic 3D maps of beached MPD which will provide a better understanding of beach attributes that evoke MDP trapping, accumulation and mobility. Following the aging of plastic debris when stored on beaches will reveal dominating MPD transformations and rates, including fragmentation rates, which will provide key information to model fate of MPD.

Challenges Addressed

Challenge 1: Marine Pollution

Challenge 8: Digital Representation of the Ocean

Challenge 10: Behaviour Change

Start date: 01/05/2022

End date: 30/04/2025

Lead Contact: Astrid Delorme (astrid.delorme@sigma-clermont.fr)

Host programme: 15. Early Career Ocean Professionals (ECOPs)

100.2. Urbanized coastal sustainability under GCCscenario

Instituto de Investigaciones Marinas y Costeras -IIMyC- (Universidad Nacional de Mar del Plata -UNMDP- and Consejo Nacional de Investigaciones Científicas y Técnicas -CONICET-) - Argentina

Summary

Through an inter-institutional strategy we will investigate the relationship between urbanization and other anthropic disturbance (e.g. recreation, agriculture and livestock, ports, recreational and artisanal fishing) and environmental variations due to climate change on ecosystem functions (e.g. biogeochemical cycles, biological productivity) and services (e.g. fishing, tourism, conservation, nutrients and pollutant filtering/retention, sequestration of atmospheric CO₂, prevention of coastal erosion) of the coastal Buenos Aires Province (Argentina). This is the most urbanized coast of Argentina (1.2 million people that doubles during the summer). We want to contribute to the conservation and sustainable use of these ecosystems, providing scientific information and advice to stakeholders. Citizen science and participation of stakeholders are key for the success. Formation of high quality human resources (MSc, PhD and, non-degree courses) will be a by-product of this project.

Challenges Addressed

Challenge 2: Protect and Restore Ecosystems

Challenge 4: Sustainable Ocean Economy

Challenge 10: Behaviour Change

Start date: 01/11/2021

End date: 01/06/2025

Lead Contact: Oscar Iribarne (iimyc@mdp.edu.ar)

Host programme: 34. Ocean Cities, an international network of cities in harmony with the marine environment (Ocean Cities/OC-NET)

102.2. MetaZooGene: Metabarcoding Zooplankton Diversity

University of Connecticut - United States of America (USA)

Summary

MetaZooGene ML2030 will work toward a global vision for integrative molecular – morphological taxonomic analysis of marine zooplankton biodiversity. The overarching goal is to promote and facilitate DNA barcoding and metabarcoding to characterize local-to-global patterns of biodiversity and biogeography of zooplankton. Applications include monitoring of ecosystem health, rapid detection of impacts of climate change, characterization of food webs, and identification of introduced and non-indigenous species. Deliverables include taxonomically-comprehensive global-scale DNA sequence reference databases for barcode gene regions (see <https://metazoogene.org/database>) required for species identification. Recommendations for best practices will be documented in review papers in peer-reviewed open access journals. Capacity-building goals will be met through symposia for early career scientists and those from developing countries, to be held in association with international conferences.

Challenges Addressed

Challenge 2: Protect and Restore Ecosystems

Challenge 9: Capacity Development

Challenge 10: Behaviour Change

Start date: 01/06/2022

Lead Contact: Ann Bucklin (ann.bucklin@uconn.edu)

Host programme: 17. Marine Life 2030

108.2. Ocean Tracking Network

Ocean Tracking Network, Dalhousie University - Canada

Summary

The OTN global partnership draws on regional networks (e.g., those of S. 12, plus others including the Gulf of Mexico (iTAG) and South America (MigraMar)) and participants from Academia, government, Non-governmental organizations, industry, Indigenous groups, local stakeholders to develop the scientific infrastructure and data systems needed for researchers to co-design studies to track the movements, survival, distributions, habitat use and migration pathways of valued marine animals critical to food security and socioeconomic well-being in coastal communities. Data generated is curated and distributed according to partner-accredited data policies, FAIR principles, and respecting Indigenous ownership rights using our internationally accredited data system (Associate Data Unit of the IOC's International Oceanographic Data and Information Exchange). Knowledge generated is communicated to help inform policy development, management decisions and to empower all stakeholders.

Challenges Addressed

Challenge 2: Protect and Restore Ecosystems

Challenge 7: Ocean Observations

Challenge 9: Capacity Development

Start date: 01/01/2021

End date: 31/12/2030

Host programme: 17. Marine Life 2030

109.2. Seabed Mining & Resilience To EXperimental impact

National Oceanography Centre - United Kingdom of Great Britain and Northern Ireland (UK)

Summary

Our project aims to provide the critical scientific understanding and evidence base to reduce the risks of the developing deep-sea mining industry for polymetallic nodules. Our project team have secured access to data and test plans, to allow detailed experimental evaluation of impact and recovery from realistic mining disturbance on a decadal scale of vital relevance to understanding the long-term sustainability of deep-sea mining. The project aims to better understand the ecosystem in the Pacific abyss and how the different components interact and interconnect.

Challenges Addressed

Challenge 1: Marine Pollution

Challenge 2: Protect and Restore Ecosystems

Challenge 4: Sustainable Ocean Economy

Start date: 01/06/2021

End date: 31/05/2025

Lead Contact: Daniel Jones (dj1@noc.ac.uk)

Host programme: 57. Challenger 150 - A Decade to Study Deep-Sea Life

1 10.2. Synergistic Observing Network for Ocean Prediction

Meteorological Research Institute/Japan Meteorological Agency - Japan

Summary

SynObs is being proposed as a common comprehensive Decade Project to the three Decade Programmes, ForeSea, CoastPredict, and Observing System Co-Design. SynObs will seek to extract maximum benefit from combining various observation platform measurements, typically satellite and in situ observation data, or combinations of coastal and open ocean platforms for ocean/coastal predictions. SynObs aims to identify the optimal combination of the different ocean observation platforms through observing system design and evaluation, and to develop assimilation methods which can enable drawing synergistic effects from these combinations. Targets of SynObs include open-ocean, such as global, tropical, mid-latitude, arctic and subarctic oceans, as well as coastal-sea, and biogeochemical observing systems.

Challenges Addressed

Challenge 5: Ocean-Climate Nexus

Challenge 6: Community Resilience

Challenge 7: Ocean Observations

Start date: 01/07/2022

End date: 30/06/2026

Lead Contact: Yosuke Fujii (yfujii@mri-jma.go.jp)

Host programme: 28. ForeSea - The Ocean Prediction Capacity of the Future

121.2. Ocean Twilight Zone Project

Woods Hole Oceanographic Institution - United States of America (USA)

Summary

The Ocean Twilight Zone Project is an established project within the TED "Audacious Projects" portfolio. We seek endorsement of the OTZ Project under the previously endorsed Decade Programme number 189 entitled "Joint Exploration of the Twilight Zone Ocean Network. The Ocean Twilight Zone Project has three pillars: 1) rapidly advance scientific understanding of the twilight zone, 2) dramatically improve public awareness of the deep ocean and inform policy development and 3) develop low-cost pervasive technologies and build capacity for further studies of the mesopelagic ecosystem.

Challenges Addressed

Challenge 2: Protect and Restore Ecosystems

Challenge 3: Sustainable Blue Food

Challenge 5: Ocean-Climate Nexus

Start date: 01/07/2018

End date: 01/07/2024

Lead Contact: Heidi Sosik (hsosik@whoi.edu)

Host programme: 189. Joint Exploration of the Twilight Zone Ocean Network (JETZON)

126.2. Integrated coastal ocean observing and predicting

Euro-Mediterranean Centre on Climate Change Foundation - Italy

Summary

The Core project “PredictOnTime” will deliver new predictive capacities, services and products for the global coastal ocean based on innovative integrated observing systems and forecasting systems implemented and tested at selected Pilot areas. The PredictOnTime Action will deliver a relocatable, easy to be deployed, cost effective observing and forecasting system of systems as well as best practices. The observing and forecasting systems will be deployed and tested with users and stakeholders in Pilot coastal areas in more than 20 nations in the global coastal ocean. We will focus on observing and predicting natural extreme events in the global coastal ocean on due time and with the appropriate accuracy so that impacts on natural and human resources and assets will be minimized. We will develop and consolidate the citizen science observing capacities and support through the new predictive capability the innovative and sustainable applications for coastal solutions/services.

Challenges Addressed

Challenge 6: Community Resilience

Challenge 7: Ocean Observations

Challenge 8: Digital Representation of the Ocean

Start date: 01/05/2022

End date: 30/04/2027

Lead Contact: Giovanni Coppini (giovanni.coppini@cmcc.it)

Host programme: 144. Coast Predict

127.2. Future Coastal Ocean Climates

National Oceanography Centre - United Kingdom of Great Britain and Northern Ireland (UK)

Summary

FLAME will generate innovative, high-resolution, downscaled decadal to centennial projections of future coastal ocean climates and the impacts on coastal ecosystems, hazards, services and resources at the local-regional scales necessary for informed decision making. It will achieve this by making a step-change in regional Earth System Model process fidelity and climate downscaling approaches, and by providing new projections, downscaling, predictive and hazard assessment tools. FLAME sets a high-level framework to be collectively pursued throughout the Decade, aiming to inform future IPCC reporting. Partners here will target specific polar, temperate, subtropical and tropical regional coastal oceans where initial progress will be made. It will use CoastPredict, other Decade programmes and partner stakeholder networks to turn advances in understanding and predictive ability into actionable products that can inform climate change adaptation and mitigation solutions.

Challenges Addressed

Challenge 5: Ocean-Climate Nexus

Start date: 01/10/2022

End date: 30/09/2027

Lead Contact: Jo Hopkins (j.hopkins@noc.ac.uk)

Host programme: 144. Coast Predict

129.2. Southern Ocean Flux Capability Working Group

Southern Ocean Observing System - Australia

Summary

The Southern Ocean has been identified as the prime region for net global uptake of heat and carbon dioxide. While air-sea fluxes determine this uptake, existing air-sea flux products vary significantly, and a number of studies have suggested that infrequent storm-related events may play a significant role in governing net air-sea exchanges. The core aim of SOFLUX is to reduce uncertainties in our understanding of air-sea and air-sea-ice exchanges. SOFLUX facilitates the implementation of an observing system of essential ocean variables (EOVs) to support investigations on dynamics and change in Southern Ocean air-sea fluxes, the development of priority measurements, standardized methodologies for collecting and archiving data, the optimal design of field programs and remote sensing systems, strategies for implementing field observations, and support for development of assimilation and gridded flux products.

Challenges Addressed

Start date: 01/02/2022

End date: 31/12/2025

Lead Contact: Alyce Hancock (hancock@soos.aq)

Host programme: 97. An Observing Air-Sea Interactions Strategy (OASIS)

131.2. Connecting communities to Atlantic Ocean observing

National Oceanography Centre - United Kingdom of Great Britain and Northern Ireland (UK)

Summary

Ocean observing is a necessary service to fulfil our collective stewardship responsibility and understand the effects of climate change on human life, economic, and environmental wellbeing. To fully realize this service, we must expand our view of the value of ocean observing and move towards a sustained observing system to deliver crucial information to stakeholders and policymakers. AtlantOS supports Atlantic basin scale implementation by identifying and fostering collaborative partnerships among user communities and ocean observing and data networks. AtlantOS is actively building formal relationships with international bodies and AtlantOS-connect will facilitate engagement with national and regional entities, connecting observing networks and providing visibility to the common challenges, needs and opportunities of Atlantic communities.

Challenges Addressed

Host programme: UN2. Observing Together: Meeting Stakeholder Needs and Making Every Observation Count

132.2. Fisherman Weather Field School (SLCN)

Agency for Meteorology Climatology and Geophysics (BMKG) - Indonesia

Summary

Fisherman Weather Field School is an ocean literacy programme that provides education for fishing communities to support understanding of the information provided by weather and ocean climate services. Targeted users include traditional fishermen, aquaculture fishermen, salt pond farmers, and related stakeholders in fisheries and coastal communities. This programme enhances the level of understanding of maritime weather and climate forecasting and information thereby improving safety. It also increases fishers' understanding and awareness of the importance of maritime observation equipment which are essential to produce accurate maritime weather and climate information for their safety when conducting their maritime activities. Their participation in protecting the ocean observation equipment installed on the ocean is crucial to prevent vandalism. This project has proven to be successful in Indonesia and a pilot is proposed to replicate the initiative in Fiji and the Philippines.

Host programme: UN2. Observing Together: Meeting Stakeholder Needs and Making Every Observation Count

136.2. Enhancing capacity development in the TAC Region

UNESCO IOC Regional Secretariat for the Caribbean and Adjacent Regions Sub-Commission IOCARIBE - Colombia

Summary

During the TAC Region Webinars capacity building was identified at the forefront and a cross-cutting subject. It was recognized that developing local expertise with lasting benefits can lead to transformative change in CD. It was also recognized that the lack of access to knowledge, equipment and opportunities are relevant barriers to achieving regional sustainable development. Implementing blue economy policies is recognized as critical to achieving the SDGs and delivering smart, sustainable, and inclusive growth. It was identified during the Kick-Off Conference that the region must develop local initiatives related to raise awareness on blue economy knowledge, and that promoting engagement among stakeholders and local expertise is relevant to address this need. It is critical to create an enabling environment for experience exchange on ocean public policy targeting local blue economy initiatives, and to enhance knowledge about the blue economy (including deep-sea uses) in the Region

138.2. Integrating Coastal Hazard Warning Systems for TAC

UNESCO IOC Regional Secretariat for the Caribbean and Adjacent Regions Sub-Commission IOCARIBE - Colombia

Summary

Participants in TAC workshops recommended the Co-Design, Co-Production and Co-Delivery of Integrated Multiple Coastal Hazard Early Warning System and Services for the Tropical Americas and Caribbean (TAC). The project will prioritize the integration of existing and new coastal hazards early warning systems and services considering four components: Monitoring and Warning, Risk Knowledge, Warning Dissemination and Communication, and Response Capabilities, supported by capacity development. Linkages to regional and international efforts and national and local priorities would be maximized and strengthened. Many ocean-related hazards and their impacts would be considered, including Tropical Cyclones, Climate Change, Tsunami, Sargassum, Wastewater, Oil Spills, and Coral Bleaching, mindful of the impacts and lessons from COVID-19. Regional, national and local impacts will be identified and common features of the underlying infrastructure elements will be enhanced and optimized.

Host programme: 28. ForeSea - The Ocean Prediction Capacity of the Future

140.2. MACHC-IOCARIBE Seabed 2030 Project

UNESCO IOC Regional Secretariat for the Caribbean and Adjacent Regions Sub-Commission IOCARIBE - Colombia

Summary

The priority Project outcome is to create an accurate, observation-based bathymetric map of the Tropical Americas and Caribbean Region through multi-sector partnerships and collaboration. This map is essential for the sustainable use of critical ocean resources and to inform and improve forecast capabilities, disaster risk reduction and response, environmental management and scientific investigation activities. A diverse region that has rich biodiversity and marine resources, many economies are dependent on coastal and marine tourism. The region is also extremely vulnerable to climate change and natural hazards. Extreme weather events are common in the region with nine Category 3 hurricanes and above occurring in 2019-2020. Currently 23% of the region is mapped according to the GEBCO 2021 Grid, an increase of 3% since 2020 when the IOCARIBE and the MACHC initiated this joint Project. This progress is highly encouraging given the pandemic circumstances.

142.2. NOAA Harmful Algal Bloom Forecasting

NOAA National Centers for Coastal Ocean Science - United States of America (USA)

Summary

NOAA's Harmful Algal Bloom (HAB) forecasts alert coastal managers to blooms before they cause serious damage. Short-term (up to twice weekly) and longer-term seasonal forecasts identify potentially harmful levels of developing algal biomass, including projected bloom location, size, direction, and severity in a particular region. NOAA continues to issue HAB forecasts by region, which are based on understanding the causes of HABs and how they respond to changing weather, physical ocean conditions, and in-situ environmental factors. NOAA additionally funds research in support of operationalizing several pilot regional HAB forecasts for continued prevention and mitigation.

ENDORSED DECADE CONTRIBUTIONS

4.2. Center: Chemical Currencies of a Microbial Planet

Woods Hole Oceanographic Institution - United States of America (USA)

Summary

One-quarter of the carbon derived from photosynthesis on Earth cycles rapidly through a pool of seawater metabolites generated by the activities of microbes. These molecules help govern the global carbon cycle, provide life-supporting nutrients, and support the function of marine food webs that ensure a vital and healthy ocean. The Center for Chemical Currencies of a Microbial Planet (C-CoMP) will leverage recent advances in analytical and data sciences, incorporate new ocean sampling technologies and an open-science framework, and engage educators and policy-makers to promote a deeper understanding and appreciation of the chemicals and microbial processes that underpin ocean ecosystems and other microbiomes that affect our daily life.

27.2. Inundation Signatures on Rocky Coastlines

Williams College - United States of America (USA)

Summary

Understanding the records of coastal wave inundation is fundamental for long-term risk analysis but it is still not possible to know inundation magnitude and frequency with any accuracy, or to know the difference between effects of past storms vs tsunamis. These long-lived deposits provide the main records of prehistoric events, so reconstructions are crucial to provide predictions or future inundation regimes. The Inundation Signatures on Rocky Coastlines (ISROC) Research Coordination Network will unite researchers around the world to 1. Define the research gaps; 2. Extend and train the community of researchers; 3. Develop standards for gathering and archiving data; 4. Develop cyberinfrastructure for researchers to upload and access data; and 5. Create opportunities for collaboration and exchange. Information transfer, and providing data and interpretations to local stakeholders, is a primary goal.

148.2. Sea Grant International

NOAA - United States of America (USA)

Summary

Central to the Decade is the need for stakeholders to co-develop and co-deliver transformative, multi-disciplinary ocean science while linking and aligning scalar-specific initiatives to broader priorities. However, in research programs that lack bottom-up mechanisms, important local issues are lost to larger national or subnational institutions, and needed info is never generated or not applied. Valuable research may be published, but never properly transitioned to managers and policy-makers. In addition, local and indigenous knowledge that could guide research programs is often lost in top-down models. The National Sea Grant College Program is a proven model to engage universities, government agencies, and stakeholders acting in partnership to promote research, education, and outreach/extension related to marine issues. This project would share the model with international partners and encourage the establishment of similar programs through workshops and learning exchanges.

150.2. National Sea Grant College Program

NOAA Sea Grant - United States of America (USA)

Summary

For over 50 years the National Sea Grant College Program (Sea Grant) has generated and delivered actionable science to tackle the most pressing challenges facing our marine and coastal communities and environments and will continue to do so in support of the Ocean Decade priorities. Sea Grant's key to success lies in the synergistic interplay of research, extension, and education initiatives, representing a rich knowledge-to-action network that empowers coastal stakeholders with science-based information, products, and services to inform decision-making and help solve pressing societal problems.

81. Global Ocean Biodiversity Initiative

Global Ocean Biodiversity Initiative - United Kingdom of Great Britain and Northern Ireland (UK)

Summary

GOBI is an international partnership of organisations committed to advancing the scientific basis for conserving biological diversity in the marine environment. In particular, GOBI contributes expertise, knowledge and data to support the Convention on Biological Diversity's efforts to identify and promote ecologically or biologically significant marine areas (EBSAs) by assisting a range of intergovernmental, regional and national organisations to use and develop data, tools and methodologies. GOBI also undertakes research to generate new knowledge that will enhance environmental protection, management and sustainable use of specific areas in the ocean.

106. MIGRAVIAS: Connecting Marine Protected Areas (MPAs) through ocean swimways to protect migratory routes and critical habitats of endangered species.

MigraMar - United States of America (USA)

Summary

The status of many endangered migratory marine species has continued to deteriorate over the last twenty years despite regulatory measures and the creation of marine protected areas. The Swimways Initiative, MIGRAVIAS, aims to reverse these trends by providing tangible protection for species that move along predictable routes and building resilience to climate change. MigraMar will work with national governments to identify and protect at least seven swimways (MigraVias) that link Marine Protected Areas across the Eastern Pacific region. This initiative involves transboundary collaboration in data collection, analysis, management, enforcement, and sustainable and equitable use of the benefits generated.

Challenge 8: Digital Representation of the Ocean

Challenge 9: Capacity Dev

Start date: 01/07/2022

End date: 31/12/2027

Lead Contact: Wenxi Zhu and Zhiwei Zhang (w.zhu@unesco.org; zzw@fio.org.cn;)

Host programme: Not yet defined

UN22. Stem the tide of Asia's riverine plastic emission into the ocean

IOC Sub-Commission for the Western Pacific (WESTPAC), IOC/UNESCO - Thailand

Summary

River is recognized as a major source of marine plastic waste. It was estimated that more than half of marine plastics comes from Asia's rivers. This Decade Action aims to generate timely and reliable riverine plastic data to inform waste management and policy recommendations, support technology innovation and promote behavior change, with a view to arresting worsening riverine plastic and microplastic pollution.

Challenges Addressed

Challenge 1: Marine Pollution

Challenge 2: Protect and Restore Ecosystems

Challenge 9: Capacity Development

Challenge 10: Behaviour Change

Start date: 01/06/2022

End date: 31/12/2028

Lead Contact: Wenxi Zhu and Daoji Li (w.zhu@unesco.org; daojili@sklec.ecnu.edu.cn;)

Host programme: Not yet defined

UN23. Accelerating capacity development transformations in the Western Pacific - Regional Network of Training and Research Centers (RTRCs) on Marine Science

IOC Sub-Commission for the Western Pacific (WESTPAC), IOC/UNESCO & UNESCO Bangkok - Thailand

Summary

The proposed Action -RTRCs will accelerate transformations in capacity development, develop and sustain required capacity for sustainable development in the Western Pacific, through the establishment of Regional Training and Research Centers (RTRCs), and provision of regular training and research opportunities to young researchers and other ocean stakeholders from the region and beyond.

Challenges Addressed

Challenge 1: Marine Pollution

Challenge 2: Protect and Restore Ecosystems

Challenge 5: Ocean-Climate Nexus

Challenge 9: Capacity Development

Challenge 10: Behaviour Change

Start date: 01/06/2022

End date: 31/12/2030

Lead Contact: Wenxi Zhu, Kentaro Ando, Fangli Qiao and Aileen Tan Shau Hwai
(w.zhu@unesco.org; andouk@jamstec.go.jp; andouk@jamstec.go.jp; qiaofl@fio.org.cn; aileen@usm.my)

ENDORSED DECADE PROJECTS

Fisheries and Oceans Canada (DFO)

UN2021-002. WYTEC Blue - Women & Youth Technical Capacity for the Blue Economy: Growing Technical Capacity amongst Women and Youth in Canada & West Africa for a Safe, Secure and Sustainable Blue Economy

DOTCAN Institute - Canada

Summary

Project aims to strengthen and connect emerging capacity of a small-island developing state and partner institutions in western Africa with Canadian multi-sectoral expertise. Project is focused on a primarily virtual training program with objectives related to advancing a sustainable blue economy through ocean technology, maritime security, and business development. Pilot cohort will focus on women and youth participants.

Lead Contact: Debany Fonseca P. Batista (dfonsecabatista@dotcan.africa)

Host programme: Not yet defined

UN2021-003. Ocean School Global Community Project: Building Ocean Literacy through Community Engagement

Dalhousie University - Canada

Summary

Project seeks to develop content that illustrates how global communities are innovating to solve ocean challenges. Project seeks to define and prototype a new approach to build capacity in knowledge creation, sharing, and education and to empower communities (in the Canadian Arctic and Peru) via the Ocean School platform using a variety of tools and methods, which will be available in 4 languages. The project has the potential to expand to other countries/regions in the future once framework is established.

Lead Contact: Dr. Boris Worm (bworm@dal.ca)

Host programme: Not yet defined

UN2021-004. First Nations – Trusted Crowd-Sourced Bathymetry & Capacity Building in British Columbia, (FN-TCSB&CBBC)

CIDCO - Canada

Summary

Project will use crowd-sourcing approach to collect hydrographic data in remote areas of BC coast. Objectives will be achieved by building capacity of Indigenous communities through engagement, training, and knowledge transfer. A similar project was previously conducted in the Canadian Arctic.

Lead Contact: Dominic Ndeh (dominic-ndeh.munang@cidco.ca)

Host programme: Not yet defined

UN2021-005. Monitoring ecological resilience in Northern Fisheries inshore regions through community-based environmental genomics

eDNAtec - Canada

Summary

Focused on eDNA technologies, this project will conduct a baseline biodiversity assessment, inform habitat models for key economic species, and empower local communities to get involved in their own biodiversity management through citizen science approaches and student training via co-op programming. A framework will be developed to support future collaboration and research.

Lead Contact: Dr. Mehrdad Hajibabaei (Mehrdad@ednatec.com)

Host programme: Not yet defined

UN2021-014. X-Oceans: Enhancing Ocean Literacy in Youth in Rural Northeastern Nova Scotia

St. Francis Xavier University - Canada

Summary

Project aims to enhance existing resources and implement an innovative educational curriculum (K-12) that will inform and educate rural communities to understand and value the ocean through hands-on experiences.

Lead Contact: Regina Cozzi (rcozzi@stfx.ca)

Host programme: Not yet defined

UN2021-025. Blue Carbon as a Canadian Climate Change Solution: Modelling the Mitigation Potential of Kelp Under Future Climate Change Scenarios

University of Victoria - Canada

Summary

This project aims to quantify the blue carbon potential of kelp ecosystems in Canada and will provide a quantitative assessment of the future extent of kelp forests, and their potential to mitigate climate change. This project represents the first Canada-wide estimates of kelp distribution.

Lead Contact: Dr. Julia K. Baum (baum@uvic.ca)

Host programme: Not yet defined

UN2021-026. Mapping and Improving High-Value Habitat influenced by Derelict Fishing Gear in the Salish Sea

Malahat Nation - Canada

Summary

This project will map areas of derelict fishing gear and damaged habitats, followed by efforts to remove gear. Methods incorporate both natural and Indigenous knowledge, as well as community engagement components.

Lead Contact: Tristan Gale (Tristan.Gale@malahatnation.com)

Host programme: Not yet defined

UN2021-030. Advancing Indigenous Partnerships in Ocean Science for Sustainability: A contribution to the United Nations Decade of Ocean Science for Sustainable Development

Ocean Networks Canada Society - Canada

Summary

This project will develop and coordinate a team to help prioritize and facilitate Indigenous ocean science priorities within Canada for the Decade. Initiative would also work to promote and publicize the Decade within coastal Indigenous communities.

Lead Contact: Kim Juniper (kjuniper@uvic.ca)

Host programme: Not yet defined

UN2021-031. Advancing Ocean Literacy for the UN Decade in Canada

Ocean Networks Canada Society - Canada

Summary

The project support to the Canadian Ocean Literacy Coalition to advance ocean literacy with the context of national and international efforts in this field. It will measure ocean literacy through the development of a new measurement framework and improve the diversity of stories and voices within Canada's ocean science community.

Lead Contact: Diz Glithero (diz@colcoalition.ca)

Host programme: Not yet defined
